A Novel Method For Handwritten Digit Recognition System

objective&Goals.

To ensure effective and reliable approaches for recoginiton of handwritten digits and make banking operations earier and error free.

DO The handwrittewn digit recognition is the ability of a coputer to regcnioze the human handwritten digit from different sources like images,papers,touchscreens etc	**SAY** **Digit recognition using MNIST dataset is major project made with the help of neural network**
FEEL **The digit recognition is the capability of computer application to recognize the human handwritten digits**	**Think** The system not only variate the digits but also variate the written style of the users

GAINS: The system not only produces a classification of the digit but also a rich description of type instantiation parameter which can yield information such as writing style

PAINS:
It is not done in real time as a person writes and therefore not appropriate for immediate text input
Handwritten number recoginition we face numerous challenges
